

PATIENT SAFETY INDICATORS

C. DIFFICILE

Quarter	C. Difficile rate per 1000 patient days
Q1 (April – June 2025)	0.9
Q2 (July – September 2025)	0.5
Q3 (October – December 2025)	0.0
Q4 (January – March 2026)	

The Clostridium Difficile (C. Diff) rate is calculated as a rate per 1000 patient days. The total “patient days” represents the sum of the number of days during which services were provided to all inpatients the given time period. The rate is calculated as follows:

$$\frac{\text{Number of new hospital acquired cases of C. Diff in HDH} \times 1000}{\text{Total number of patient days for one month}}$$

C. Diff rates may vary month to month; the smaller the facility; the greater the rates will vary. This is because a change in even one case in a small facility will cause the rate to go up or down considerably.
